Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Response to Arguments

1. Applicant's arguments, filed 6/21/07, with respect to the rejection(s) of claim(s) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of newly found prior art.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Ossmann et al. (7103400). Ossmann et al. disclose a method for generating a three-dimensional ultrasound image of a body region exhibiting spatial variation due to breathing motion or motion artifacts (col. 3 lines 3-14). The method involves applying an ultrasound transducer arrangement to a body region of a patient exhibiting spatial variations due to motion artifacts and conducting an ultrasound scan of the region to obtain electric signals (col. 3 line 56 - col. 4 line 37), generating temporally successive B-images of the body region due to the motion, and registering the successive B-

images and combining the registered successive B-images in an image processor to form a three-dimensional image of the body region (col. 4 line 63 – col. 5 line 57).

Ossmann et al. teach acquiring volume segment image data such as volume segments 120, 122, 124, comprising three-dimensional slices of the conical image volume, where each of the volume segments may be imaged as a series of two-dimensional slices and then generating a three-dimensional image of the image volume (col. 6 line 53 – col. 7 line 4).
